EDUCATION

Indiana University Bloomington

Master of Science in Computer Science

Bloomington, USA

Aug 2024 – May 2026

P.E.S. College of Engineering

Bachelor of Engineering in Computer Science

India

Jun 2017 – May 2021

PROFESSIONAL EXPERIENCE

Head Teaching Assistant

Indiana University Bloomington

Aug 2025 – May 2026

USA

- Led coordination across 5 TAs for the JavaScript (I211) course, coordinating grading rubrics and weekly syncs to deliver consistent support across 200 students; also supported a Python/Flask full-stack web development course.
- Evaluated semester-long JavaScript projects end-to-end reviewing code architecture, async patterns, and UX and ran weekly office hours to resolve complex bugs and Git/GitHub workflow issues.

Software Development Engineer

Fiverr

Sep 2022 – May 2024

Remote

- Delivered end-to-end Next.js solutions for 4 SME clients, owning full project lifecycle from requirements to deployment; rebuilt static sites into SEO optimized apps, increasing inquiry rates by 20%. [Website](#)
- Achieved 95+ Google Lighthouse scores via lazy loading, next/image optimization, and code-splitting, reducing page load time by 20% and JavaScript payload by 25%.
- Delivered 100% mobile-responsive layouts with Tailwind CSS and extracted reusable component libraries, cutting redundant code and improving maintainability across all 4 client code bases.

Application Development Associate

Accenture

Aug 2021 – Aug 2022

India

- Developed SPFx web parts in React wired to Node.js backend services, replacing synchronous polling with async API calls, reducing dashboard load latency by 60% across 5 internal dashboards serving 200+ stakeholders.
- Built Node.js RESTful API endpoints handling request routing, JSON parsing, and error handling for enterprise data pipelines supporting 7M+ users, reducing latency by 40%.
- Implemented OAuth 2.0 token acquisition flows in SPFx, configuring Microsoft identity endpoints to enforce role-based access control across internal enterprise applications.
- Configured Docker container builds and Azure DevOps CI/CD pipeline stages with automated test gates, contributing to deployment workflows that enabled zero-downtime releases and cut release cycles.
- Debugged a high-priority Node.js API failure in an org-wide release calendar, identifying a malformed SharePoint data extraction issue through network payload inspection and restoring stable backend delivery.

PROJECTS

Adverse Drug Event Guard | *Python, Neo4j, FAISS, LLaMA, Sentence-BERT, Streamlit* Feb 2026 – May 2026

- Built ADEGuard to surface adverse drug event patterns across 4K+ unstructured VAERS reports combining semantic search with knowledge graph reasoning to catch what keyword search alone misses.
- Designed a Neo4j knowledge graph (5 entity types) modeling symptom relationships with frequency aggregation enabling structured causal reasoning beyond unstructured retrieval.
- Deployed a local LLaMA-3.2 pipeline that grounds every response in retrieved VAERS evidence, making drug safety analysis explainable and reducing hallucination risk.

TwinMind | *Kotlin, Jetpack Compose, Hilt, Room, Coroutines, Flow* | [GitHub](#)

Aug 2025 – Oct 2025

- Architected a crash-resistant voice recording engine with a smart 30-second ring buffer preserving recordings under low-storage conditions, achieving 100% data retention in stress tests simulating sub-50MB free space.
- Integrated a streaming LLM API for real-time summary generation, wiring Kotlin Flow into Jetpack Compose state to deliver word-by-word UI updates with sub-200ms perceived latency.

TECHNICAL SKILLS

Frontend: React.js, Next.js, TypeScript, JavaScript, Tailwind CSS, HTML, CSS, Jetpack Compose

Backend: Node.js, Spring Boot, Java, Kotlin, Python, RESTful APIs, Auth.js, Zod

Databases: PostgreSQL, MySQL, SQL Server, MongoDB, Room (Android)

Cloud & DevOps: AWS, Azure DevOps, Docker, CI/CD Pipelines, VMware, SharePoint

Mobile: Android (Kotlin, MVVM, Coroutines, Flow, Hilt), Retrofit

Tools: Git, GitHub, VS Code, PyCharm, Android Studio, Power BI, Power Apps
